

BUILDING
INNOVATION

We design the future!

PRODUCT
CATALOG
COLLECTION 2026

At BUILDING INNOVATION, we transform the way spaces are built and remodeled with modern, accessible, and visually striking solutions. Our PVC product line is designed to provide style, durability, and practicality in every project.

All our solutions are environmentally friendly, promoting **cleaner, more efficient, and sustainable construction**. Durable, low-maintenance materials with a smaller ecological footprint, designed for those seeking quality and design without sacrificing environmental responsibility.

Our commitment to sustainability is an essential part of our identity. At BUILDING INNOVATION, we promote the use of recyclable materials, responsible processes, and technologies that reduce waste on construction sites. Every product is designed to optimize resources, extend the lifespan of buildings, and contribute to a future where design and construction coexist in harmony with the environment.

Lightness is also sustainability. Our lightweight products facilitate transport, reduce energy consumption during installation, and decrease the structural load on buildings. This translates into fewer emissions, less use of heavy machinery, and a more efficient and environmentally friendly construction process.

Safety is at the heart of our innovation. Our materials are **non-flammable**, meaning they do not spread fire and help minimize risks in the event of an incident. This feature enhances the protection of spaces, offering peace of mind, regulatory compliance, and superior performance in residential, commercial, and industrial projects.

OUTDOOR WPC MOLDING

The Exterior WPC Slat is an architectural element made from Wood Plastic Composite (WPC), designed for outdoor applications that require high weather resistance and a natural wood-like appearance. Its composition combines wood fibers and polymers, resulting in a durable, stable, and low-maintenance product—ideal for façades, pergolas, lattice structures, and decorative exterior cladding.

DECK FACADE

OUTDOOR

BACK 

The DECK façade is an exterior cladding system mainly used to cover the façades of commercial, residential, institutional, and country projects. This type of façade not only enhances the aesthetic appearance of the building but also provides functional benefits, such as thermal insulation and protection against weather conditions.

DECK OUTDOOR FAÇADE – WALNUT

BACK 

Uses

Specialized for outdoor use, this product is made of high-resistance expanded PVC, designed to withstand humidity and extreme temperature conditions.

Installation

Note:

The pieces should be cut using an angle grinder with a continuous diamond blade.

1) Thanks to its geometry, each piece connects with the next until the desired area is covered.

2) Apply fast-drying mounting adhesive on the guide edges located on the back of each piece, then install onto the wall.

3) Installation must start from the bottom up, moving from floor to ceiling.

INSTALLATION INSTRUCTIONS

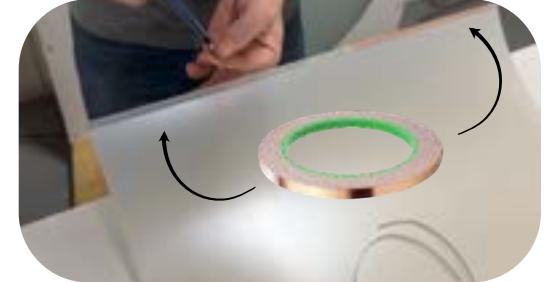

1. Clean the glass where the film or smart film will be installed with alcohol and a lint-free cloth (do not use ammonia or abrasives).

2. Open the Smart Glass Film box and lay the product out on the work surface. Cut the film to the required size.

3. Apply **silver conductive paste** to the area where the bus bar (bronze conductive channel bar) will be installed.

4. We apply **adhesive copper tape** to the sides of the adhesive to protect the electronics from it.

6. Let it dry and cure for 12 to 24 hours

5. Connect one bus bar to a red wire and another bus bar to a black wire using silver putty and encapsulate with silicone to test the final electrical connection on the sheet. Use a **multimeter** to test the connections.

6. Once everything is "OK", we proceed with the installation of the smart film or sheet on the glass, for which we remove the protective plastic. We use a plastic spatula to remove any bubbles that may form and ensure a perfect installation.

7. The high-temperature cables connected to the tape, which are exposed in the smart film sheet or film, must be sealed with **silicone glue** for cables on glass.

8. Our system is ready to be turned on with the remote control or can be connected to the home or office automation system.
